

## Leaf Pickup and Removal

---

Our seasonal Leaf Removal Program is currently underway. We appreciate your patience as the darn things always seem to fall at the same time on every property. We may BAG at sites where there is not a great deal of leaves. At other sites, we may STAGE the leaves for a later pick-up by our Vacuum Crew. In any case, don't worry, we'll be back.

## Irrigation Systems...

---

It is the time of year to think about Decommissioning your Irrigation System for the season. Unless you have new Fescue Grass or have planted Fall Annuals or plants, your system should be shut down for the season. In the event you are still watering your new annual beds, watch for upcoming Frost Events and shut off the system the night before so that your annuals are not damaged.

## Route Changes...

---

During the winter months our Routes may change. This is done to allow Fescue lawns to thaw out, since they can be damaged by servicing when frosted.

Also, with the Holidays coming, we will be adjusting our Schedules to allow our staff the Holiday Off - we will not miss your service though.

## Are the PANSIE BLOOMS disappearing? ...

---

If you notice your Pansie Blooms or Plants disappearing, please call us at once. This could be caused by either Deer, Rabbits or Slugs. We offer a Treatment Program and Netting Protection depending on the particular pest.

**Please Call Associated to help with your Fall Planting Needs**
